Subject: Gluten Testing

To Whom It May Concern,

Samples of wine aged in our barrels were sent to the University of Nebraska Lincoln, Institute of Agriculture and Natural Resources, Food Allergy Research and Resource Program for analysis. The final results indicated a level of gluten below the lower limits of quantification for the R-Biopharm RIDASCREEN® Gliadin which is 5 ppm (part per million) gluten. Thus, we can extrapolate that our production process does not impart a level of gluten into the wine above 5 ppm.

Please feel free to contact our office if you need any additional information on this topic.
